New RJG In-Mold Temperature Sensors

1mm Flush Mount Temperature Sensors

The 1mm Flush Mount Temperature Sensor is a miniaturized K type cavity temperature sensor designed for application where small size and fast reaction is important. The 1mm temperature sensor is available in both machinable (TS-FM01M-K) and non-machinable (TS-FM01-K) sensor tips.

1.5mm Spring Loaded Temperature Sensor

The 1.5mm Spring Loaded Temperature Sensor is a miniaturized K type temperature sensor designed for application where a witness mark is to be avoided. The TS-SL01.5-K can be mounted behind the cavity surface insuring no marks are left on the part and avoiding flash problems sometimes experienced with some materials. Its removable feature also allows for easy maintenance.
